Low	SWC-103	Achilles	2

Code

1. SWC-100 / lines: 13 - 15 Low Achilles

A security vulnerability has been detected.

```

12
13     constructor() {
14         //
15     }
16

```

In detail

Functions that do not have a function visibility type specified are public by default. This can lead to a vulnerability if a developer forgot to set the visibility and a malicious user is able to make unauthorized or unintended state changes.

2. SWC-103 / lines: 2 Low Achilles

A security vulnerability has been detected.

```

1 // SPDX-License-Identifier: MIT
2 pragma solidity ^0.8.0;
3 pragma abicoder v2;

```

In detail

Contracts should be deployed with the same compiler version and flags that they have been tested with thoroughly. Locking the pragma helps to ensure that contracts do not accidentally get deployed using, for example, an outdated compiler version that might introduce bugs that affect the contract system negatively.
